Computer Science Honours student specialising in cybersecurity, with hands-on experience developing full-stack applications and security tooling using Python, JavaScript, React, Node.js, SQL, Docker and Kubernetes. Currently building **KubernetesSentinel** as an Honours research project, a tool that scans Kubernetes clusters for CIS benchmark compliance, checks manifests for misconfigurations before deployment, and maps out possible attack paths using RBAC data. Focused on penetration testing, application security and secure system design, and looking to start my career in a software development or cybersecurity role.

KEY SKILLS

Languages	Python, JavaScript, Java, SQL, C++, C#
Software Development	React.js, React Native, Node.js, Express.js, REST APIs, OOP, Data Structures & Algorithms, Software Engineering
Cybersecurity	Penetration Testing, Ethical Hacking, OWASP Top 10, Network Security, Web & Application Security, CIS Benchmark Compliance, RBAC Auditing, Attack Path Analysis
Cloud & Infrastructure	Docker, Kubernetes, Cloud Deployment, Linux, Kali Linux
Databases	PostgreSQL, SQL, Database Design
Tools & Networking	Git, GitHub, Streamlit, TCP/IP, DNS, DHCP, HTTP/HTTPS, Network Troubleshooting

FLAGSHIP PROJECT

KubernetesSentinel

01-Jan-2026 - Present

Kubernetes security posture and compliance platform, Honours research project. Python, Streamlit, Kubernetes API, PostgreSQL

- Building a security tool for Kubernetes clusters that combines live compliance scanning, pre-deployment checks and remediation workflows in one platform
- Scans live clusters against 131 CIS Kubernetes Benchmark controls, tested and validated on a deliberately vulnerable cluster, with pass/fail tracking and audit reporting
- Wrote a PDF parser that reads official CIS Benchmark documents and converts the control text into rules the tool can test automatically
- Added a pre-deployment scanner that checks manifests for misconfigurations before they reach the cluster
- Built a graph view that maps out possible privilege escalation and lateral movement paths based on RBAC and workload configuration
- Added role-based login and a rollback feature so risky changes can be undone on the live cluster
- Generates audit reports summarising compliance results and remediation steps

EXPERIENCE

University of Johannesburg

01-Feb-2025 - 01-Oct-2025

Student Assistant, Computer Science (ISFAP Bursary Tutor)

- Selected for the role based on academic performance and reliability
- Helped 50+ undergraduate students with programming assignments, debugging and exam preparation
- Taught data structures, algorithms and programming fundamentals in one-on-one and group sessions
- Supported lecturers with day-to-day academic tasks

PROJECTS

Eskom Expo Judging System

01-Feb-2025 - 01-Oct-2025

Full-stack and mobile application. React Native, Node.js, Express, SQL. Showcased at ACSSE Project Days, University of Johannesburg

- Built a digital judging platform to replace the paper-based process used for science expo administration
- Built the React Native app judges use to log in, view their assigned projects and submit marksheets
- Built the backend in Node.js, Express and SQL to manage judges, projects, events and marksheets for nearly all primary and high schools participating in the national Eskom Expo
- Set up the evaluation and ethics review workflow, which cut down the amount of manual paperwork involved

Artis At Auction

01-Jul-2024 - 01-Oct-2024

E-commerce auction platform, one of the top second-year projects at UJ

- Co-built an online auction platform connecting local artists with buyers nationwide
- Built the product listing and bidding features
- Collaborated with team members on system design and implementation of core auction functionality

COMPETITIONS & EXTRACURRICULAR

SANReN 2026 Cybersecurity Challenge

24-Aug-2026 - 02-Sep-2026

- Worked through the MISC (Miscellaneous), Stranger Things application security, and Vulnerability Assessment challenge scenarios
- Applied practical enumeration, exploitation and vulnerability assessment techniques against realistic attack scenarios

EDUCATION

University of Johannesburg

01-Jan-2026 - Present

Bachelor of Science Honours in Computer Science with Cybersecurity, NQF Level 8. Focus areas: Cloud Security, Network Security, Web & Application Security, System & Software Security

University of Johannesburg

01-Feb-2023 - 01-Nov-2025, 74%

Bachelor of Science: Information Technology in Computer Science and Informatics, NQF Level 7. Data Structures & Algorithms, Software Engineering, Object-Oriented Programming, Data Communications

INTERESTS

Cybersecurity & ethical hacking, software development, networking & emerging technologies, continuous learning
